

Analyses of industrial waste waters

Laboratoire Dubois performs analyses of industrial waste waters as part of its activities. We propose the analysis of the most requested parameters in the frame of the Swiss legislation (Oeaux). The analysis consist on the determination of amounts of dissolved metals, or of residual hydrocarbons.

ICP-OES Analysis equipment

In order to take advantage of economy of scale, we advise our customers to send us their samples at the end of the month, during the last working week.

This way allows us to bring together many samples from various sources and to rationalize the analyses process, leading to a more convenient pricing for our customers.

OUR RESULTS ARE ACCEPTED BY THE CANTONAL AUTHORITIES
